

**IDEMIA and Ron Smith & Associates, Inc.  
New Training Class**

**Incorporation of Technology into the ACE-V Process**

In collaboration with Glenn Langenburg and Ron Smith & Associates, IDEMIA is offering a new training class for latent print examiners. This new course demonstrates how to improve your ACE-V methodology using technology and various software tools.

This course is a 3-day (24 hour total) instructional course, consisting of both lecture and practical exercises. The material is at an intermediate level of difficulty.

The course is instructed by Glenn Langenburg, Ph.D. and Certified Latent Print Examiner. The course explores the inclusion of technology into the ACE-V process. Students will learn to use a variety of tools to increase the objectivity of their ACE-V process. During practical exercises, students will use software tools to help assess latent print value, sufficiency of latent prints, documentation of the ACE-V process, and increasing the efficiency of their examinations.

Students will be instructed on the course centerpiece: Case AFIS. They will learn how to create a case-specific database, encode and search latent prints to increase efficiency and reduce error rates. We will also explore the use of other software tools including: quality mapping, GYRO annotation, ACE-V documentation, and the use of statistical models. No other class offers instruction and training for latent print examiners to use these tools and how to properly incorporate them into the ACE-V methodology. You and your casework will benefit by the inclusion of these tools. As an FYI, the purchase of Case AFIS is not required for this course; however, students purchasing a Case AFIS system prior to the course will be instructed on their purchased system during the course.

**Anaheim, CA | January 9-11, 2019**  
**Instructor: Glenn Langenburg, PhD, CLPE**  
**Duration: 3 Days | Hours: 24 | Tuition: \$800.00**
